

FOR MAC USERS ONLY

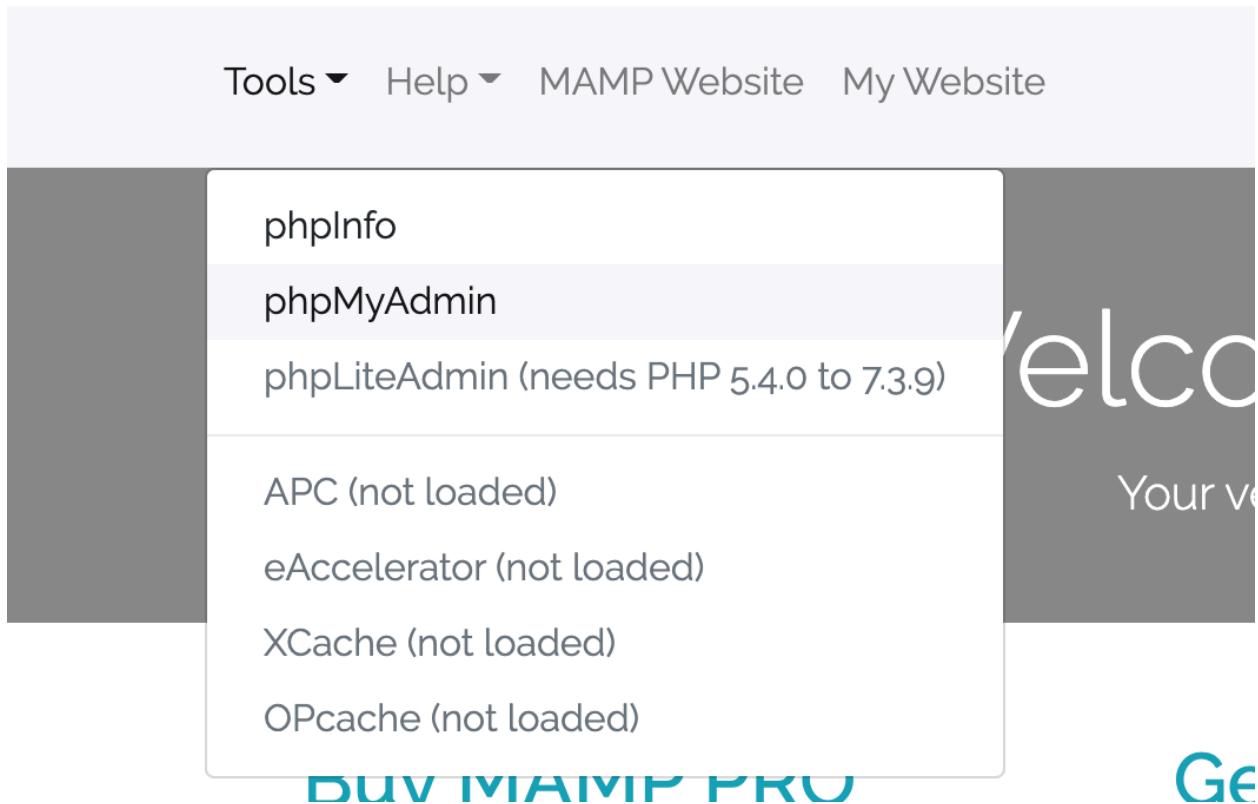

1. Go to <https://www.mamp.info/en/mac/> and click on free download.
2. Click on Download MAMP & MAMP PRO for Mac.
3. After the downloading completes. Click on the package to install from the pkg file.
4. Run MAMP.

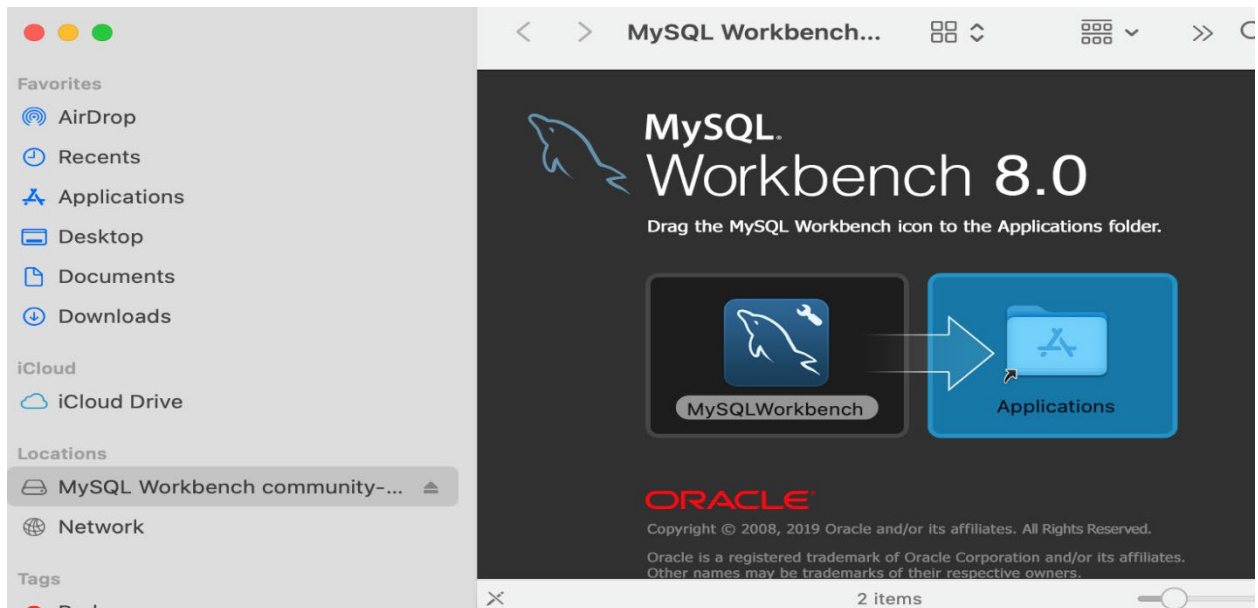

5. Click on start.
6. It will take some time to start and a window will open in your browser.

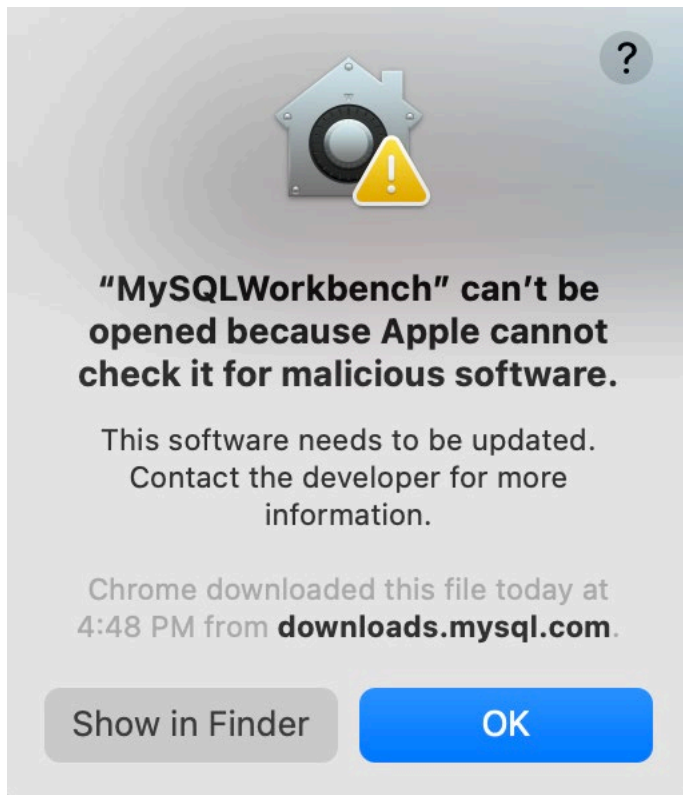

7. Click on tools and select phpMyAdmin

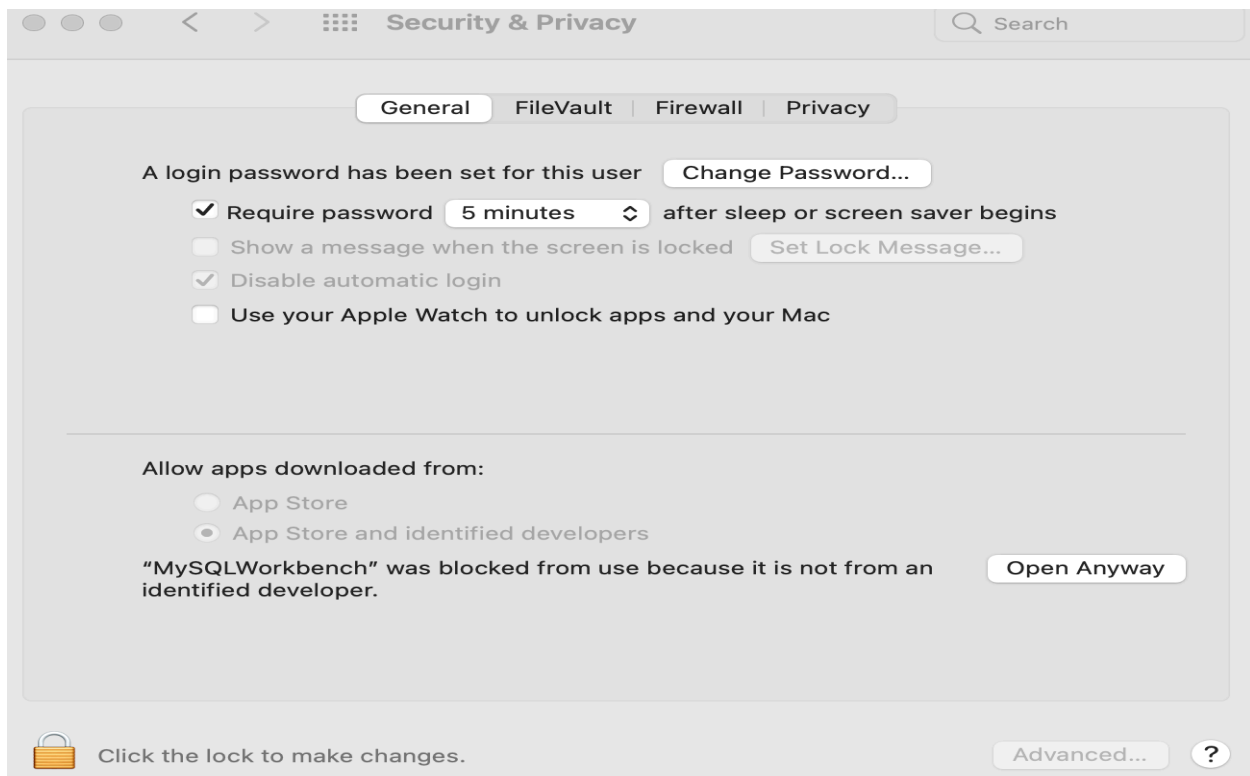

8. Login using username: root and password: root (in my case).
9. Note down the port no.
10. As the latest version of MySQL is not compatible with the latest iOS update so please download from this website <https://downloads.mysql.com/archives/workbench/>.
11. Select version to 8.0.21 and download it.
12. Once the download is complete use the dmg package to copy the files to your system.

13. An error message will pop up like:

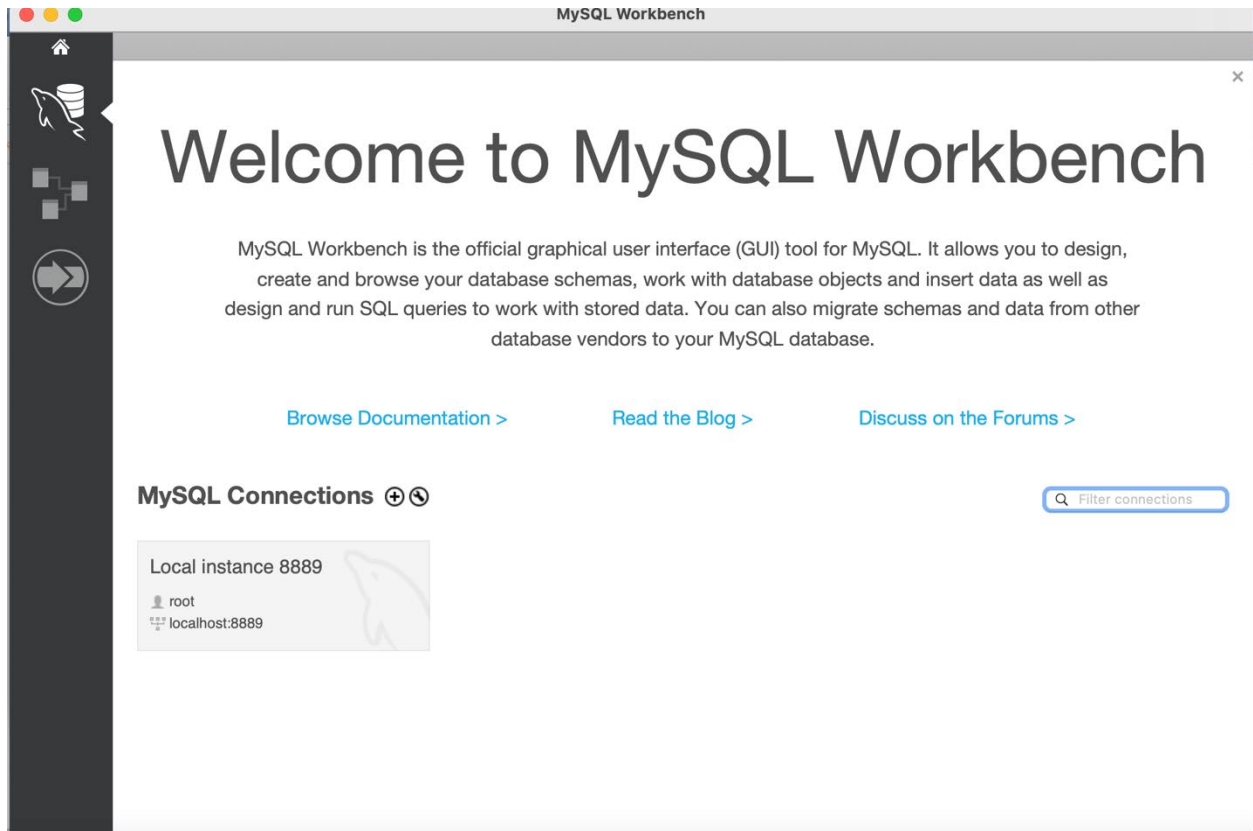

14. Click ok and go to system preferences > security and privacy >

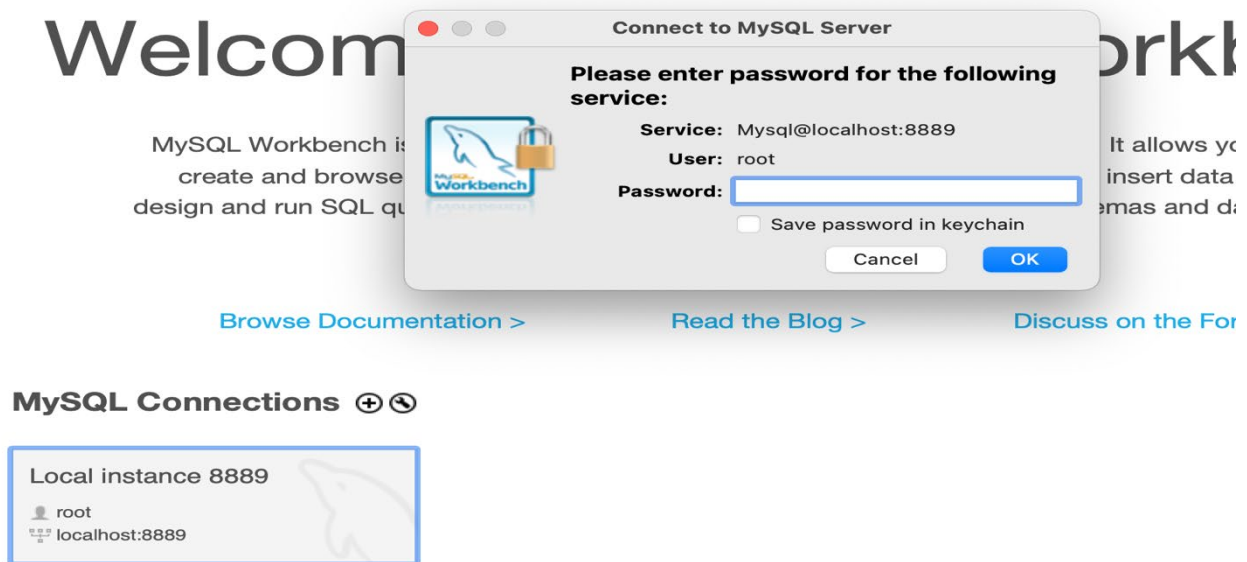

15. Click on the lock icon at the bottom left of the screen and enter your PC password or apple id password.

16. Click on Open Anyway. (As it is blocked by the apple so we need to give access to it.)

17. Now your Workbench will launch.

18. Now click on the local instance and enter the password for the localhost and check the port no.

19. You are good to GO.
